(2)

17 If a, b, c, d are in G.P, prove that $(a^{n} + b^{n}), (b^{n} + c^{n}), (c^{n} + d^{n})$ are in G.P

Solution:

TABLE I INPUT PARAMETERS

| Symbol | Input value |
|--------|-------------|
| а | ar^0 |
| b | ar^1 |
| С | ar^2 |
| d | ar^3 |

$$r = \frac{b}{a} = \frac{c}{b} = \frac{d}{c} \tag{1}$$

$$=\frac{b^n+c^n}{a^n+b^n}$$

From eq(1)

$$\implies \frac{b^n + c^n}{a^n + b^n} = \frac{c^n + d^n}{b^n + c^n} \tag{3}$$

Hence proved they are in in G.P

TABLE II INPUT PARAMETERS

| Symbol | Input value |
|--------|-------------|
| а | 0.25 |
| b | 0.25(2) |
| c | 0.25 (4) |
| d | 0.25(8) |

$$\frac{b^n + c^n}{a^n + b^n} = \frac{0.25^n (2^n + 4^n)}{0.25^n (1^n + 2^n)}$$
(4)

$$= \frac{0.25^n (2)^n (2^n + 4^n)}{0.25^n (2)^n (1^n + 2^n)}$$
 (5)

$$=\frac{0.25^n (4^n + 8^n)}{0.25^n (2^n + 4^n)} \tag{6}$$

$$a^{n} + b^{n} = 0.25^{n} (1^{n} + 2^{n})$$

$$= \frac{0.25^{n} (2)^{n} (2^{n} + 4^{n})}{0.25^{n} (2)^{n} (1^{n} + 2^{n})}$$

$$= \frac{0.25^{n} (4^{n} + 8^{n})}{0.25^{n} (2^{n} + 4^{n})}$$

$$\implies \frac{b^{n} + c^{n}}{a^{n} + b^{n}} = \frac{c^{n} + d^{n}}{b^{n} + c^{n}}$$

$$(5)$$

$$(6)$$

$$\implies \frac{b^{n} + c^{n}}{a^{n} + b^{n}} = \frac{c^{n} + d^{n}}{b^{n} + c^{n}}$$

$$(7)$$

$$x(n) = x(0) r^n u(n)$$
(8)

$$X(z) = \frac{x(0)}{1 - rz^{-1}}, \quad |z| > |r| \tag{9}$$
